Pomoli in cristallo satinato, stipite in alluminio anodizzato sezione quadrata**

Double pocket sliding doors with Haka-Cha decorated satin finish glass
Satin glass handle, aluminium jambs and architraves

Vetri decorati

Decori realizzabili su vetro trasparente o satinato sia su ante "tutto vetro" che intelaiate

Patterned glass

Satin etched glazed or frameless glass door, patterns on transparent or satin glass

Scelto il soggetto, artistico, fantastico o geometrico, viene riprodotto su lastra di vetro satinato tramite sabbiatura ottenendo il classico effetto luminescente. In alternativa si può lavorare su lastra float, andando a sabbiare tutta la superficie per ottenere il disegno prescelto in trasparente; in questo caso, a lavoro ultimato, la lastra decorata viene trattata con un prodotto idrorepellente, al fine di proteggerne la delicata smerigliatura.

Having chosen the desired theme (any theme can be reproduced; artistic, geometric or creative) it is reproduced on a satinated sheet of glass at varying depths to obtain the desired luminescent effect.

Another option is to sandblast the surface over a stencil creating a transparent design that is then protected with a water repellent finish.

k

Sabbiature ed applicazioni a freddo possono essere realizzate su lastre di cristallo trasparente satinato temprato o stratificato secondo norme U.E., di vari spessori da applicare a tradizionali telai o a forme tra le più svariate. Nuove proposte decorative e ad effetto. Richiestissime sono le soluzioni di arredo moderno sia in abitazioni private che in studi, ambienti pubblici ed uffici.

Modern interiors in both private and commercial environments require new and innovative designs. Karis designs can be manufactured on to transparent or satin, either tempered or safety glass in line with the latest European norms.

Applicazioni a freddo

Murano glass coloured inserts

Per "applicazioni a freddo" si intendono i tozzetti in vetrofusione. E' possibile comporre un decoro personalizzato, sia su vetro trasparente che su vetro satinato. Scegliete tra i vari modelli, visibili nelle pagine successive, quelli di vostro interesse. Verranno applicati sul vetro scelto (trasparente o satinato) secondo la disposizione da noi indicata.

Murano Glass Coloured Inserts: choose from a wide range of designs on the following pages on either transparent or satin finish glass. Our artists can also reproduce your own individual designs if required, or develop a theme or idea for you.

Vetrofusione a base ossido

Oxide based glass fusion

Tecnica antichissima usata già dai Fenici: le formelle sono ricavate da lastre di vetro tirato e colorate a disegno con ossidi metallici sapientemente mescolati per ottenere le varie sfumature cromatiche. Nella fusione, si sprigiona ossigeno che, rimanendo imprigionato nella lastra, produce il caratteristico e incontrollabile effetto "bollicina" che dona brillantezza, movimento e unicità all'oggetto.

This ancient technique was first used by the Phoenicians: tiles made from glass that has been carefully coloured, stretched and cut to obtain the desired chromatic shades. During the process, oxygen is released inside the glass creating small bubbles which gives this product its unique and distinctive finish.

Vetrofusione a base murano

Murano glass fusion

Peculiare lavorazione di vetrofusione in cui il disegno viene creato dall'accoppiamento della lastra base con particolari vetri precolorati prodotti da case vetraie muranesi. L'abilità realizzativa è data sia dallo studio del disegno a mosaico che dall'uso di vetri e cromie tecnicamente compatibili tra loro. L'effetto brillante dato dai colori intensi e dagli inserti a rilievo, si ottiene grazie alle alte temperature di fusione.

An unusual process of glass fusion using a sheet of glass and mosaics from the artists of Murano. This beautiful result is obtained by carefully selecting the coloured mosaics with particular characteristics which withstand the high temperature fusion leaving the brilliant, intense colours intact.
